ProSep® Ultra Plus Chromatography Media

The highest dynamic binding capacity Protein A affinity chromatography media, designed for cost-effective, large-scale purification of today's higher titer therapeutic antibodies.

ProSep® Ultra Plus media is a Protein A-based affinity resin with the highest dynamic binding capacity and flow rate capability of any comparable resin on the market. Based on the proven technology of ProSep® media, ProSep® Ultra Plus media provides increased capacity and productivity compared to competing resin-based technologies.

Benefits

- Highest capacity
- Proven technology
- High throughput for maximum productivity
- Reliable scale-up
- Lower cost of operation

Proven Technology

ProSep® Ultra Plus media has been developed from ProSep®-VA media, which is used extensively in the manufacture of today's approved therapeutic monoclonal antibodies. ProSep® Ultra Plus media is the result of extensive investigation into optimizing ProSep® media to address the developing needs of the industry.

Utilizing smaller CPG® particles, together with refinement of pore size selection and ligand immobilization, has enabled the significant increase in dynamic capacity.

The open, interconnected pore structure maintains rapid mass transfer, resulting in these higher dynamic capacities being achievable over a wide range of flow rates or residence times (see Figure 1).

As a result of the open pore structure and outstanding mass transfer characteristics (see Figure 2), the sharp breakthrough curves permit higher loading percentages to be utilized before risk of premature breakthrough, thereby maximizing column capacity.

Operational Flexibility

The porous glass base matrix is fully incompressible, leading to a linear relationship between back pressure and flow rate. The response of a ProSep® Ultra Plus media packed column to increased flow rate is therefore entirely predictable over different column lengths and diameters. Although a smaller particle size is utilized in ProSep® Ultra Plus media, the combination of total rigidity and particle size still allows operation at flow rates of 500 cm/h if desired. This relationship is illustrated in Figure 3 with data generated using columns of different diameters.

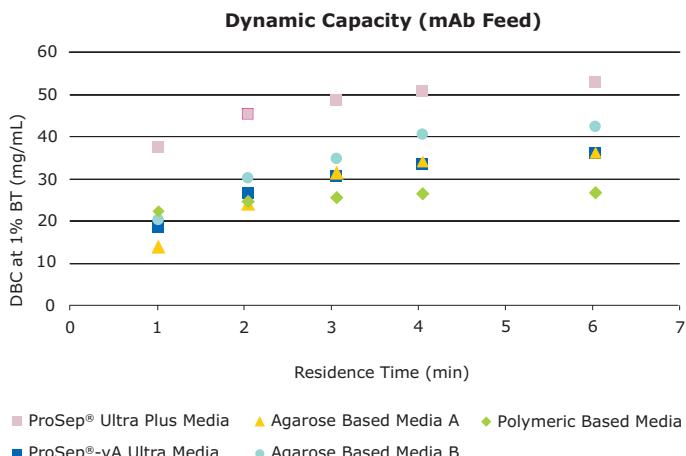

Figure 1.

Dynamic capacity of ProSep® Ultra Plus media compared with competitive media.

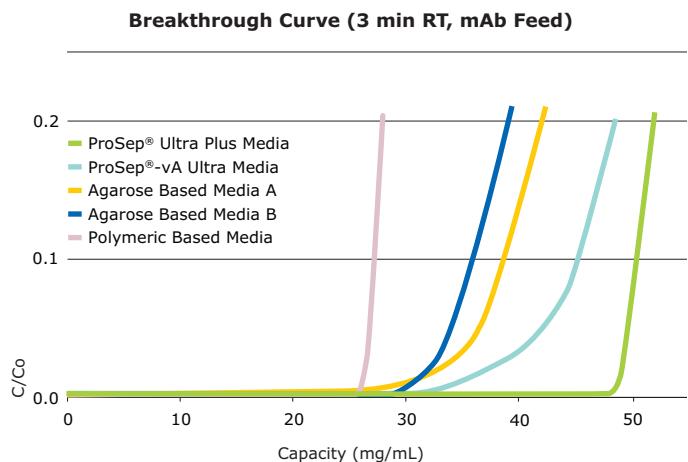

Figure 2.

Breakthrough curves for ProSep® Ultra Plus media compared with competitive media.

Large-scale column (1.6 m) packed with ProSep® media.

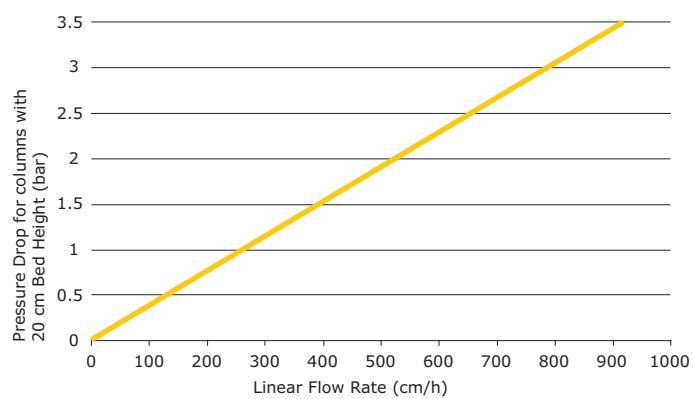

Figure 3.

Response of ProSep® Ultra Plus media to increased flow rate.

Storage and Handling

ProSep® Ultra Plus media is supplied in 0.1M acetate buffer, pH 5.2 and 1% benzyl alcohol as a preservative.

During use, it is recommended to store ProSep® Ultra Plus media in 0.1M acetate buffer, pH 5.2 containing 1% or 2% benzyl alcohol as a preservative. Alternatively, ProSep® Ultra Plus media may be stored in phosphate-buffered saline (PBS) or other suitable buffer containing a preservative. The acceptable environmental storage temperature for ProSep® Ultra Plus media is between 2 – 8°C.

ProSep® Ultra Plus Prepacked Column Specifications

Components	Column – Polypropylene (PP) Bed Supports – 17 µm Polypropylene/Polyethylene (PP/PE)
Connections of the MiniChrom Columns	10 – 32 UNF 1/16 in. fingertight, PEEK or PTFE Capillaries 1/16 in. (o.d.) with 0.5 – 0.8 mm (i.d.).
Column Geometries/Volumes	8 mm (i.d.) x 20 mm 1.0 mL 8 mm (i.d.) x 100 mm 5.0 mL
Maximum Back Pressure	20 bar
Chemical Stability	Columns are tolerant to aqueous buffers and salt solutions, 8M urea, 6M guanidine hydrochloride, organic solvents and detergents.
Temperature Range	4 – 30°C
Storage	2 – 8°C

ProSep® Ultra Plus Media Characteristics

Base Matrix	Controlled Pore Glass
Particle Size	60 µm
Ligand	Recombinant native Protein A
Binding Capacity – Static	Typically ≥ 67 mg/mL (hIgG)
Binding Capacity – Dynamic	Typically >50 mg/mL (10% breakthrough at 3 – 6 min residence time)
Recommended Mobile Phase Velocity	Up to 500 cm/hr
Recommended Bed Height	20 cm
Recommended Long-Term Storage	2 – 8°C, plus bacteriostat

Manufacturing Standards and Quality Assurance

We recognize the importance of providing regulatory support and meeting industry quality standards. ProSep® Ultra Plus media utilizes recombinant native protein A derived from *E. coli*. No mammalian-derived materials are used to manufacture ProSep® Ultra Plus media and its components. All ProSep® media products are manufactured in a facility certified to internationally recognized standard ISO® 9001 and subjected to routine independent surveillance audits.

Ordering Information

Media*	Qty/Pk	Catalogue No.
ProSep® Ultra Plus Media	2 mL	175118822
ProSep® Ultra Plus Media	10 mL	175118824
